Automated Security for Home & Business

Your home and business are your biggest investments, so it makes sense to ensure that these investments are protected. Our smart alarm systems and security cameras are a simple way to make sure you are protecting your family, home and business.

Our alarm systems can be set up to alert you when there is something wrong in your home and business. Arm or disarm the system, remotely lock or unlock doors or be alerted to event triggers all from your smart phone, anywhere in the world.

Smart Security Technology

Having peace of mind that your home and business is safe is priceless. Our team at Automated Innovation will work with you to design a custom solution to suit your individual security needs.

For example, you might want to be alerted when your kids get home from school or you may wish to access your security cameras in real time from your phone when you are travelling.

You can even add or delete users and grant temporary access to any lock in the house or business.

In addition, IR Nightvision technology ensures you have complete awareness even during the night time and push notifications alert you if anything needs your attention.

Safeguard Your Home and Business

If you would like to find out more about our incredible home and business security solutions, please contact our team of experts today to book your **complimentary consultation** and demonstration.

Automated Innovation has a brand new showroom located in Mayfield West, Newcastle, NSW if you would like to visit us in person.
